

Individual income tax rates vary significantly depending on several factors, including:

- * **Country of residence:** Tax systems differ greatly worldwide. The US has a progressive system, while some countries have flat rates.
- * **Filing status:** Married filing jointly, single, head of household, and qualifying widow(er) have different rates.
- * **Tax year:** Tax laws and rates change periodically.
- * **Income level:** Most countries with progressive tax systems have different rates for different income brackets.
- * **Deductions and credits:** These can significantly reduce an individual's taxable income.

To find the specific tax rate for an individual, you need to specify the country, tax year, and other relevant information.

For example, in the **United States** for the **2023 tax year**, the rates are progressive, ranging from 10% to 37%.

In short, there's no single answer to your question. You need more specific information to determine the applicable tax rate.
